

# Free Construction Safety Assembly

## Big Trucks. Big Danger.

Do your students know the safety rules in construction zones? When it comes to construction areas, the old adage “better safe than sorry” could not be more true. If your elementary school is in or near a construction zone, we would love to come and give our “Think Safety” assembly to your students. In this fun and interactive assembly, we teach kids how to be safe around construction and even bring a rousing relay race!

Don't play in or around construction zones

Cross only at designated areas: look left, look right and then look left again

Orange means construction

Use designated detour routes

Always obey all flaggers and construction signs

Stay safe around trucks: if you can't see the driver's face, they can't see you

Don't touch or play on construction equipment and don't follow construction trucks

Never go beyond the safety fences or construction cones

### With big trucks comes big danger.

Be truck smart, especially around construction. Often a truck driver won't be able to see what's immediately around his truck, so be alert and be careful.

Contact us to schedule your Think Safety assembly today!
